Technical founder · Independent consultant

L'Aquila, Italy · Remote or hybrid

I co-founded three companies in seven years and lived them from the inside, first writing the code and then deciding where it should go. Today I work independently, alongside small and mid-sized companies — in Italy and abroad — that want to use software, automation and artificial intelligence without losing time and money to them. I've learned what it takes to be in there: and that's what shapes the advice I give you.

WHAT I DO

Software consulting and development

We design the architecture of what you need together and, if you like, I build it. I can work alongside the team you already have, or stand in for it as long as it takes, without taking anyone's place.

Automation and AI integration

We look at where the time goes and try to give it back to you, bringing artificial intelligence in at the points where it genuinely changes someone's working day.

Project direction

Goals, priorities, timelines, people. I act as a bridge between the people who decide and the people who build: that's where projects crack, and often it just takes someone who speaks both languages well.

PATH

2025 — 2026

Convivo Studio

Co-founder · Development team lead · Head of AI adoption

A creative studio built to make technology, design and communication talk to each other. I led the development team and guided the studio and its clients into using artificial intelligence day to day.

2023 — 2025

Pathway

Co-founder · Fullstack developer

An AI-first startup for learning English and preparing for the IELTS certification. Funded by Gruppo Mondadori through their accelerator programme. From the first line of code to a product in people's hands, learning along the way what answering to an investor really involves.

2019 — PRESENT

Basement Eleven

Co-founder · Fullstack developer

A full-service software house doing client web development at every scale. This is where I learned the craft — and what keeps a project-driven company standing.

EDUCATION

DECEMBER 2019

MSc in Computer and Industrial Automation Engineering

Università Politecnica delle Marche

Automation means letting a process run on its own where it used to need a person. It's what I do with companies today; back then we were talking about machines.

TOOLS

EVERY DAY

TypeScript · Node.js · Angular · Express · Firebase

CONFIDENT WITH

LLMs and model APIs · LangChain · LangGraph · RAG and agentic RAG architectures · chatbots

FAMILIAR WITH

Claude Code and agent-assisted development

LANGUAGES

Italian

Native

English

Fluent in writing and speech: a call in English is no trouble. B2.

Spanish

Currently learning, for the pleasure of it.
